THE REDCLIFF REVIEW

THURSDAY, MAY 20 1935

Number 30

Council Has Busy Session Last Monday

Set Tax Rate For 1935 At
50 Mills

Town council chamber was a busy place last Monday evening. The council of revision was held before the regular council meeting and a few complaints were registered against present assessments. Mr. Lang M. L. A. Mr. Hepburn, a commissioner for the Tilly East Area district and several delegations waited on council for various purposes. Besides there was a full council present.

Mr. W. Campan waited on council to complain about water leaking through ceiling in store rented from town. Council instructed the building inspector to investigate condition and have building repaired.

Mr. Hepburn representative of the Tilly East Area Commission waited on council and explained the reasons why a "tax gate" was installed at railway crossing just east of the station, and stated that since the town objected to this gate it had been decided to remove it.

Mr. Hepburn said that when the gate was located there as it would keep cattle from this section out of town gardens. Mr. Benjamin asked for water from the town to water his plot of ground near the green house. As the rate was set at \$20.00 an acre, it was decided this same rate would apply.

Mr. H. Lang, M. L. A. visited council and stated he had made inquiries regarding the letter, written him by council in connection with changing plans regarding consolidation of tax arrears. He explained that owing to the closing of the season not much headway could be made, but the matter was to be left over to the tax committee of the legislature.

A petition was presented to council, signed by a number of ratepayers and residents. The petitioners claimed that the present franchise for the service between Redcliff and Medicine Hat during the past two years was not satisfactory and petitioning the council to make representation to the minister of public works asking for a change in the present system. Council was in sympathy with the suggestions of the petitioners and passed a resolution authorizing that steps be taken to bring the matter to the attention of the proper authorities.

Councillor Moore was appointed deputy mayor for the next three months.

School Board's request for \$350 for May was granted. A letter was read from the provincial surveyor asking for particulars regarding the road from Premier Brick Co. for compensation for certain lands taken up for the main highway through east end of town. The matter was left over for investigation.

The bylaw setting the tax rate for 1935 at 50 mills water, frontage rate, discounts and penalties, was given its approval.

Redcliff Dogs Get Prizes at Dog Show

English Setter Wins Cup From Local Legion

Redcliff dogs made a good showing at dog show in Medicine Hat last Friday.

There were not as many entries as usual from here but those that were entered carried off a number of ribbons and cups.

The following were among the winners:

Redcliff Princess, an English setter owned by H. J. Cox, won the local Legion cup for the best dog or bitch from Redcliff.

Golden Bell, a Pomeranian, owned by Mrs. B. B. Hodge, won first prize in the Canadian breed and limit bitches, second in the open class, and first in the reserve winners.

Redcliff Princess also won first in the novice bitch and Canadian breed classes.

Redcliff Couple Married Last Friday

Hodges - Fitzhenry

A quiet wedding took place at St. Ambrose Church last Friday, May 24th, when Rev. H. S. Haffnet joined in holy wedlock Mr. William Hodges and Miss Blanch Fitzhenry, daughter of Mr. and Mrs. Arthur Fitzhenry of this town.

Both bride and groom have lived in Redcliff since childhood and will continue to reside here as before.

Getting Ready For The Stampede Here

Arrangements are now well under way for the big stampede to be held in Redcliff on July 1st. Several improvements have been made in the grounds and a number of additional items have been added to the afternoon's program. This year promises to be better than ever.

The Dionne Quintuplets celebrated their first birthday anniversary last Tuesday. They are all healthy and doing nicely. They are the most famous babies in the world, the only quintuplets that ever lived for a year.

A delightful bridge and afternoon tea had Mrs. A. R. Ballantyne as hostess yesterday. The rooms were tastefully decorated with lilac and iris blooms. Mrs. E. L. Stone won the honors at bridge. The hostess was assisted during the tea hour by Mrs. W. King, Mrs. R. C. Jargrave and Mrs. Johansson.

Beth Pallis, a former student of Redcliff School, was among those who graduated from St. Theresa's college, Medicine Hat, on May 23rd. His Excellency, Rev. P. J. Monahan, Bishop of Calgary, attended the function and presented the diplomas to the graduates. Beth also contributed to the evening's program.

Councils and passed a motion adopting the tax consolidation for 1935 was passed.

Council Sits as Court of Revision

July One Change Made in Tax Assessor's Figures

Council sat as a court of revision last Monday evening. Six complaints were registered against present assessments in all cases but one the figures as set by the assessor were sustained by council.

C. T. Hall felt that the assessment on his block on Broadway was out of proportion with other buildings similarly located and felt that his should be reduced.

Frank Jerick complained of an assessment on his farm property north-east of town which is in the school district and taxed for school purposes. In both cases council decided to make no change.

Fred Jorgenson complained that his assessment was wrong as some buildings were removed from his lot during the past year. As this was an oversight on the part of the assessor his assessment was reduced by \$75.30.

As other complainants were not present their assessments were let stand.

Dickens Novel Proves Great Film Triumph

"David Copperfield" Takes Its Place as one of the World's Outstanding Photoplays.

"Taking its place among the truly great pictures of all time," "David Copperfield" opened yesterday at the Monarch Theatre. To say that it is at once one of the most pretentious and one of the most intimate photoplays ever made is to say too little; bigness and meanness; intimacy; it has a soul.

As it develops its absorbing story it runs the full gamut of entertainment qualities. There is a wealth of romance, a wealth of pathos, a wealth of comedy, there are melodrama and thrills and tragedy and heart. But when you leave the theatre "David Copperfield" remains with you. For it does something to the heart that baffles description.

Mr. and Mrs. Leslie Verov have next Tuesday for England where they will reside in future.

Last Sunday Queen Mary celebrated her 68th birthday with a family lunch on party at Buckingham Palace.

There was a good attendance at the football dance in L.O.O.F. hall last Friday evening and all thoroughly enjoyed the evening's program. During the evening the drawing for the trip to Calgary was made and Capt. Fairhurst won it.

Mr. Roy Schmidt put the ever on his many friends last Thursday when he quietly slipped away and got married. As Roy is naturally a quiet young man who likes to stay at home and is very seldom out around town, his cupid editor has not been able to see him since his wedding and consequently has not been able to get the party over. All we know is that he was married.

Tie Football Game Played Here Friday

Leithridge Lads Played Nice Friendly Game

One of the most interesting and closely contested football games so far this season was played here last Friday when Leithridge played a friendly game with the local line up.

The game ended in a draw with each side having scored. With the wind and ground in their favor in the first period Leithridge should have scored several goals but they did not appear to be able to get proper organization with the result that they missed numerous opportunities. On the other hand the visitors fought hard against the wind and while not able to score themselves they kept the homers well under control, not allowing them to score either.

A slight change in the line up in the second period made a noticeable improvement in Leithridge's team and they forced the play throughout the whole period, making a series of attacks and keeping the ball hovering around the visitors' goal all the time. Some nice team work was shown but they failed to locate the net.

It was a nice clean game, and the visitors made a very favorable impression on the spectators.

The following was the line up: Leithridge — Credit, Smith, Tarrant, Tennant, Davther, Anderson, Brant, Shaw, Jamieson, Morgan and Milroy. Redcliff — Kline, White, P. P. Point, A. Davidson, Lavin, Turner, Rose, Houston, S. Patterson, Sher, and E. Podesta. Referee — A. Patterson.

MEETING TONIGHT

Mr. Hecker Lang M. L. A. for this provincial constituency, will address a public meeting in Cliff Hall tonight (Thursday). His subject will be Social Legislation in the Province. An invitation is extended to all to attend.

Churches

GORDON MEMORIAL UNITED CHURCH

Pastor: Rev. H. Erskine Pow Sunday May 26th, 1935. 10 a.m. Church School. 11:15 a.m. Morning Worship 3 p.m. Service at Bowell. 7:30 p.m. Evening Worship.

Cyrus G. Pow and James Brown will be in charge of these services.

"O Lord, Honor the King."

ST. MARY'S CHURCH

Mass will be celebrated on the 3rd Sunday of each month at 8:30 a.m.

ST. AMBROSE CHURCH Rev. H. S. Hannett, Vicar. Sunday after Ascension Day, June 2nd. 8:30 a.m. Holy Communion 11 a.m. Children's service and Holy Eucharist 4 p.m. Holy Baptism. Evening 7:30.

Highway Accidents On The Increase

Extra Precautions Should be Taken During Summer

The summer season is approaching, and each Monday one may expect to read in the papers with the expectation that there will be reports of high-way fatalities involving a people's lives. High powered cars and highways of good construction have made much speed possible that the number of highway accidents has been at an alarming rate.

For this reason auto drivers should start off the summer season with the determination to drive every precaution to avoid accidents. Speed is not to be added to comfort or pleasure to a pleasure outing. The difference between necessary speed and careful driving with your car well under control makes only a few minutes difference in going from point A to B, why the rush.

Colbert Plays Dramatic Roll in New Picture

Claudette Colbert who starred in the Motion Picture Award for 1934 with a comedy portrayal, essays a total new type of characterization in a new starring Paramount picture "Private World", which is at the Monarch Theatre starting Monday.

A story laid against a background of a hospital for the insane, "Private World" presents Miss Colbert as a trim, efficient and beautiful doctor who leads the mental illnesses of others although she cannot conquer the fear of love in her own heart.

Miss Colbert and Joel M. Crook, who is married to Joan Bennett, find happiness in their experimental work until their little world is broken up by the arrival of Charles Boyer, head of the hospital, and his sample sister, Helen Vinson.

Public Meeting Tonight

The Scottish football players' vote on out in Calgary last evening by a score of 9 to 1.

Burney Ross was given the decision over Jimmy McLarnin in the welterweight fight in New York Tuesday night.

Married men will play tonight ball girls a game tonight on the old grounds.

Trials in Lancashire of processing of Canadian-grown flax into a fiber that will work over existing cotton textile machinery have proved "entirely successful."

Mr. Wm. Sellhorn returned last Wednesday from Edmonton where he has been attending University. Billy graduated with the degree of Bachelor of Commerce and second-class honors in political economy. His friends will be interested to know that he was one of the two to receive such honors and there were none taking the same course who obtained first-class honors. The Review congratulates Billy upon his success.

Inspection of Cadets Here on Wednesday A.M.

Inspector Praises Efficiency of Leaders and Lads

After inspecting the high school cadets yesterday morning Major Miller, provincial inspector for cadets and physical training in schools, highly praised the excellent showing made by the local school. He assured the cadets that they had made exceptionally high marks but said that was all he could tell them at present as he had several more schools to inspect. Their leaders, he said, were on undressed per cent efficient and the lads were exceedingly fortunate in having such capable leaders. "Your leaders are not letting you down," he said "neither are you letting them down." Major Miller assured the boys that they would not regret the training they are getting along this line as it would be of service to them when it came their turn to train other boys.

The inspector said he was glad to see the school was carrying out first aid training as this was very important. There were many lives being saved today by boys and girls through the knowledge they had obtained in their first aid training.

During the inspection the school held an excellent exhibition of P. E. by both girls and boys. This also was greatly praised by the inspector, who complimented the teaching staff and leaders on the interest they were taking along this line of school training.

At present the Redcliff School holds the army and navy shield and the opinion expressed by the spectators yesterday was that other schools in the district will have to go some to take it away this year.

Effort to Create Market For Barley

To Get Market, Quality Must Be Improved

With the difficulty in marketing of wheat there has been an effort to decrease the production of this crop with an increase in the other grains. To market the other grains effectively the quality must be improved. The National Barley Committee is endeavoring to improve and stimulate work in the improvement and marketing of Canadian barley.

The function of the National Barley Committee is to further the interests of the barley interests in Canada, by co-ordinating and stimulating the efforts of various departments and branches of the provincial and Dominion governments, and all other organizations interested in the production, marketing, transportation, processing, research and utilization of barley.

Information along this line may be secured from the National Barley Committee, 383 Grain Exchange, Winnipeg.

Exhibition in Belgium

Big Fair in Brussels Bid For World Peace

Belgium's gesture to the centennial of the peace of Europe is an international exhibition opened at Brussels, April 27.

Amid the tumult and shouting, the talk of impending conflict of nations and the stirrings for peace, Belgium projects her "World's Fair" in the hope of forwarding the friendship of nations and helping to re-establish the business of the world on a firmer basis.

With 400 acres of grounds and 150 pavilions and pavilions the promoters have planned to make the exhibition the show-window of the nations. Practically all countries of the hemisphere have places in the great show.

Science and technology, commerce, industry, and industrial development of the great modern discoveries are special features of the exhibition.

Celebration of the centenary of the first railway line and the first train between Brussels and Malines to 1835 furnish an opportunity for giving special attention to transport and means of communication.

In the departments of historical research, commemorative, the founding of the independent state of Congo has given this section an impetus.

Ancient and modern art, domestic and foreign, is housed in special buildings. With the ancient art will be seen tapestries, of which Belgium was one of the most reputed centres, together with sculpture, pottery and lace.

Figures Are Interesting

Statistics Show Important Place Occupied By Canada's Railways

The place which Canada's railways occupy in the Dominion's affairs is strikingly shown in some statistics recently released. Last year 64,628,000 tons of freight were transported by Canadian railways and 17,652,000 persons travelled on their lines. The total payroll of Canada's railways for the year amounted to \$141,978,000 paid to an average of 118,000 employees. The railways are one of the largest consumers of Canada's coal output. Some figures in this respect covering Canadian National lines show that out of every dollar of the \$131,938,078 spent last year in operating the railways, approximately 10 cents went for fuel. The fuel bill for locomotives amounted to \$14,705,991.33 for the year; the water bill amounted to \$893,700.84. Approximately 60 cents out of every dollar of expenses went for labor. Information on the commodities handled over Canadian National lines throughout the year gives a side-light on the extent to which Canada's railways have grown. Proportion of the mines constituted the largest portion of the total revenue figure, 12.02 per cent, or \$16,222,000. The largest portion of the total revenue figure, 12.02 per cent, or \$16,222,000. The largest portion of the total revenue figure, 12.02 per cent, or \$16,222,000.

Girls Are Best Sellers

Work Harder Than Boys Opinion Of Toronto Teacher

Girls are better sellers than boys "probably because they work harder," G. H. Dickinson, teacher at the Central High School of Commerce, Toronto, says. Mr. Dickinson has just completed a survey of the spelling of 18,000 Canadian children which he will present to the commercial section of the O.E.A. "The survey," he said, "was one in which the children found hardest to spell," he commented. "The easiest, we found, was 'accompany.' The survey, he said, showed that pupils in commercial schools are better spellers than students in academic and technical schools.

The February movement of bacon from Canada to Great Britain, via, 14,765,000 pounds, was almost double the volume for February, 1934. The total value of bacon exported during January and February, 1935 was \$8,700,000, an increase of \$1,622,000 pounds over the shipments in January and February, 1934.

An Old Idea

Aristotle once counted the teeth of his housekeeper and those of a male servant. He found four less teeth in the mouth of the woman, and for hundreds of years it was taken for granted that men had four more teeth than women.

1,000 pounds of shelled popovers. Mount Ararat, on which Noah landed the Ark after the great flood, is now more than three miles above sea level.

In Bed With Neuritis Every Winter

Until Kruschen Brought Relief

"For three years," writes a woman, "I have been sick in bed about three months every winter with neuritis in my hips and legs. Last winter I started taking Kruschen salts. It got relief from the first dose. This winter I have never been in bed at all." (Mrs. D. M.)

Neuritis is a result of impurities in the blood. And it is impure blood, circulating all over the system and setting up inflammation in the tissues, that causes those excruciating pains. Kruschen salts can be safely trusted to set the matter right. Because Kruschen contains just what Nature needs to permeate your internal organs back into a healthy, normal condition.

Took Part In Convention

Blind, Crippled Child Astonishes Delegates With Her Skill

Kindliness which all good school teachers feel towards children came readily to Lucille Leane, a little blind and crippled girl from Tavistock, Ontario, who took an important part in the public school education association of the Ontario Education Association's convention held recently in Toronto.

Lucille was accompanied by her parents, Mr. and Mrs. John K. Kemp, especially for the occasion. In the tiny pink frock she evoked the kindest of attentions as she was carried onto the stage by her proud father. But when she began to give her number, administrative help was sent to her.

Lucille was delighted in the hearts and minds of delegates who proudly saw in the child's artistic and skillful demonstration an example of what a home instruction unit under the auxiliary classes department of the Ontario Department of Education had been doing for physically handicapped children.

Lucille played her harp for an audience which applauded her when she was through. With excellent expression in her pleasant voice she repeated a poem which she had written. While the delegates, with rapt attention, watched her cheery, earnest face, she wrote a business letter on a typewriter with a Braille keyboard. Using a relief map of the British Isles she gave her audience a lesson in geography.

Necessity For Canada

Control Of Wheat Supply Needed States British Economist

Regulation and control of wheat supply is a necessity for Canada, and other dominions exporting wheat to Great Britain as Britain's population is no longer increasing and the wheat demand is stationary, Sir Josiah Stamp, noted British economist, stated at Montreal.

Chairman of the London, Midland and Scottish Railway and a director of the Bank of England, Sir Josiah was in Montreal while en route with Lady Stamp from Quebec to the United States.

Sir Josiah, who headed a royal commission on the Canadian wheat situation a few years ago, hoped any increased business to the Canadian wheat farmer as a result of the United States' dust storm would not start him increasing acreage and crop production under the impression the benefits would be permanent.

Popcorn seed imported into Canada from July 1, 1934 to March 1, 1935, amounted to two pounds only. During the past winter local growers at Magrath, Alberta, marketed over

Although far south of the Arctic Circle, part of Labrador's coast is made essentially Arctic in temperature by cold ocean currents.

The Mauretania Retires

Launched In 1906, The Vessel Covered 1,000,000 Miles During Its Years Of Service

The Cunard liner Mauretania, which has just been retired, was planned to be the fastest ship in the world, and not only was this distinction, but kept it for 22 years.

The Mauretania was built at the shipyard of Swan, Hunter and Wigham Richardson, at Wallasey, near Newcastle-on-Tyne, England, and was the first ship to have quadruple propellers.

The hull was launched on September 26, 1906, the Dowager Duchess of Roxburgh performing the launching ceremony. The ship's final trials took place on November 3, 1907, and she started on her first voyage to New York on November 14, 1907, making the crossing in five days, five hours and 10 minutes, and thus breaking all existing records at that time.

As late as July 1933, the Mauretania, on her way from Halifax to New York, covered 313 miles at an average of 24 knots, or 36.54 land miles per hour. This was made between Cayford Reef Light-house and Jupiter Inlet Light-house.

The Mauretania had steamed 10,000,000 miles in her career, had 200 voyages across the Atlantic, scores of cruises, many of them to the Indian and South Seas, and scouting and troop-carrying during the war. Her mileage would reach around the world sixty times. During her career she carried approximately 230,000 passengers. During the war she transported upward of 70,000 soldiers.

The Mauretania was named for a former Roman province in Northern Africa.

Grading Of Print Better

Will Shortly Be In Effect All Through West

Grading of print butter will soon be an accomplished fact in Western Canada. Hon. D. McKinnon, Manitoba Minister of Agriculture, has announced that the grading of creamery print butter in that province will go into effect June 1, making legislation having been passed recently by the province. Similar regulations are understood to have gone into effect in British Columbia and Alberta on May 1, and in Saskatchewan on June 1.

At the present time, under the Federal Dairy Industry Act, regulations provide for the grading and sale of all butter, whether in boxes or in pound prints, as only first, second, third or no grade, whereas formerly only such butter as was going on export or into storage was so graded. Under additions to the act last year provided was made for compulsory print grading, and the western provinces have been the first to pass such legislation.

Rapid Transport

London Aviator Planning West-Bed Trip To Canada

Flying what is designed to be the greatest long-range plane in the world, Capt. T. Campbell Black is planning a "weekend" trip to Canada this summer, it was learned in London.

The flight will be the second of four proposed "weekend" flights, the others being to Capetown, the Crick, and as unknown destinations respectively.

Queer Things Found

Fellows Of Grays, England, Get Many Strange Articles

The door of a Royal Air Force plane which fell off while the pilot was "busting" over Grays, England, has been picked up on Purford Ridge Range. In recent weeks the articles recorded in the Grays police books as "found" include a week's supply of washing for a family, a goat, a parrot, a number of women's dresses, a cocker and a ewe.

The American Chemical Society is developing a course in chemistry which will enable housewives to select adulterated foods.

Aberdeen, Scotland, has just installed its first automobile telephone.

Confidence

Confidence is the bedrock on which human society rests. The entire world in all its varied activities is motivated by confidence. Destroy confidence and our civilization would disappear. It has been long accepted as a truism that there is in life but one absolute certainty, which is death. And, say one writer, all other activities, to a large extent, are dependent upon confidence for their being.

There is no word in our language that is more powerful in its full meaning, one that carries with it no practical an agency to accomplish our desires or to transmute our hopes into realities than that of confidence. It has been said that it is a plant of slow growth. Yet it is one that can be nurtured by individuals and groups of individuals and brought to full fruition with little effort. It is akin to faith in that faith in a particular proposition can be made an actuality by confidence. It is in a measure a question of application. Sometimes it is an outgrowth of reason, sometimes instinct, but however acquired, it is, as stated in our opening sentence, the bedrock on which human society rests.

A home to establish on confidence, the confidence of man and a woman have in each other which begets respect and love; confidence which children have in their parents; parents seek of their children, and in turn which they repose in their offspring. Lacking confidence, a home would be impossible.

A successful business can only be built up and maintained where there is confidence, the confidence which one partner reposes in another, which the shareholders have in their managing executive, which an employer reposes in his employees, and which employees have for their employers, and finally which the business man has in his customers and his customers' promises for him. Lacking such confidence, a business will inevitably end in bankruptcy.

So, too, is the life of the community founded on confidence. First there must be confidence that there is a future for the community or that it is not by any means certain that it will not remain to constitute one; people who constitute the community group itself have confidence in the goodwill and enterprise of their associates, otherwise confidence in the community itself would be lacking. And what is true of the community is true of the nation.

It is not only essential that the citizens of a community or nation possess confidence in themselves and in each other, but it is vitally necessary that all important communities and nations repose confidence in them if they are to achieve the greatest success and rise to a proud place in the world. When confidence between peoples and nations is lost, the world is headed for trouble.

Furthermore, when a community or nation assumes an attitude or attitude of course of action which results in a withdrawal of confidence from it, such community or nation is bound to be the sufferer. Once a man breaks faith with another he destroys what, after all, is his greatest asset, the confidence which that other man has in him. He may have taken a long time to win the confidence of others, but by one act it can be quickly destroyed and forever lost. And if a community, built up as communities are by the confidence that people have in them, proceeds to evade its responsibilities and repudiate its obligations, it thereby destroys its most valuable community capital.

A dollar bill is only valuable because of the confidence which the public has in the Government or bank issuing the bill, lacking such confidence the piece of paper would be utterly valueless. If a pupil lacks confidence in his teacher, the teaching will be largely in vain. The sick patient's confidence in the doctor is half the battle in a successful recovery. The confidence in the safety of the track, of bridges to be crossed, of the dispatcher at the telegraph key, of the trained engineer in the locomotive cab, few people could be induced to undertake a railway journey.

Let the reader consider what his or her own position in life would be if they lost all confidence in their fellow citizens, in the institutions of their nation, in everything animate and inanimate which surrounds them. They would become fit inmates for a madhouse. Without confidence mankind simply could not continue to exist.

Notwithstanding this great truth, the fact remains that throughout the world to-day thousands of efforts are being put forth to destroy confidence in practically all things. Men and women are asked to place no confidence in the promises of God, to abandon their formerly held religious beliefs, to reject forms of government which it has taken centuries to develop, to surrender confidence in individual liberties, and, because they have initiative and energies, in a word, they are asked to place no confidence in themselves, to become more cogs in an economic and political machine operated by forces over which they will have surrendered all control.

Love confidence in yourself and you destroy yourself, because with loss of confidence there is loss of self-respect, loss of self-control, loss of initiative, loss of initiative and the power to do.

A Whole Of A Shark Moving Church Uphill To make way for the replanning of the city, the ancient church, St. Andrew's, is being moved to a new site. It is to be moved 18 yards up-hill. It will be eight yards higher than its present position. The replanning for the operation has been initiated by Lajos Fiedrich, a well-known engineer. The moving will cost \$250,000.

Disease Being Conquered

Thousands of Research Workers Experimenting in Wonderous Way

Wherever medical men are gathered there is news of discoveries in medicine. Behind the scenes, in medical circles with which the general public never comes in contact, are thousands of research workers in hospitals and laboratories all over the world, who probe and experiment in the most marvellous way for the cause and conquest of disease. Bit by bit, some of the most deadly ailments are being mastered, and it will only be a few years before disease now fatal, will be preventable or curable. Unless man crops up, mankind will eventually only die of old age.

Within the past few months meetings of medical men have been told of a new use for insulin in the cure of mental derangement, of snake venom to stop bleeding, of an artificial fever for the treatment of tuberculosis, operative surgery for the cure of angina pectoris, artificial creation of cancer germs which will enable cancer to be studied from the start instead of after it is well established, an extract of snake skin that has thus far cured Bright's disease in animals. And people have literally been raised from the dead. But if people lived right, and if they would visit a doctor at least once a year for a general examination, many of these ailments would be prevented.—St. Thomas Times-Journal.

Depends On Individual

Life Is Usually Pretty Much What We Make It

The best thing that we hope for are those which are most largely within our own power. We may not be able to forecast whether during the year the crops will have favorable weather, we may not know whether the particular people we are interested in will be engaged with prosper or languish, but we do know that whatever industry or energy, diligence or wisdom, we put into them will bear results. We cannot tell certainly whether uninterrupted health and peace will ridge in our households, but we know that it will depend largely upon our obedience to the laws of the body and our faithful and loving care of our families and those near and dear to us. We do not know the detail of our social life, what friends we may lose or gain, yet we know that faithfulness, loyalty, and unselfishness on our part will ensure to us pure and happy social relations.

Russian Women Sailors

One Hired Position As Third Mate On Freighter

When the Russian freighter Kallian docked in Brooklyn recently a young woman in a pink cap, blue jacket with brass buttons and a blue skirt climbed from the bridge and asked what time the baseball game started at the stadium.

She was Miss Anna Tuminina, 23, third officer of the vessel. There are three other young women in the Kallian's crew. They are Tcherichin, Tamar, a machinist and Maria Semanova and Lidia Marchuk, stewardess, each 25.

Miss Tuminina, as third mate is less of 30 years. She must stand watch at sea, shoot the sun for the ship's position, every noon, keep a log and find work for the crew.

New Refinery Process

Promises To Save Millions Of Gallons Of Gasoline In The U.S.

A new refinery process promising to save about 25,000,000 barrels of gasoline annually in the United States, was reported to the American Chemical Society by V. I. Patisier, of the Universal Oil Products Company, Chicago. A catalyst turns into gasoline some of the petroleum not otherwise convertible.

Dr. A. C. Fiedler, chief engineer, experiment stations division, U.S. bureau of mines, predicted that oil reserves are diminishing so rapidly that the present generation may have to supplement its gasoline with substitutes made from coal.

Largest Canteen In World

The world's largest canteen was opened recently by the Princess Royal. It was at the Hudson Road mills of Messrs. Messers Burton, Ltd. The canteen can seat 8,000 workers, and the kitchens can cook more than 10,000 daily dinners, which the employees are able to purchase for 10 pence. More than 10,000 employees are working at the factory.

BRITISH EMPIRE HEARS JUBILEE MESSAGE FROM THE KING

On May 6th, King George celebrated the twenty-fifth anniversary of his reign, and one of the important events on the happy day was an Empire-wide broadcast which culminated with a message from His Majesty to the world. Here we see King George in his study during a world-wide broadcast.

How Sound Travels Head Of Soviet Government

Some Facts About Its Transmission Are Very Curious

Most of us have said at some time or other: "The railway trains sound very close to-day—the rain cannot be far off." And in this observation we have been echoing the popular belief that there is a direct connection between the transmission of sound and the weather. Now researches carried on by meteorologists in England seem to indicate that this particular popular belief is no more accurate than most others.

There are some very curious facts about the transmission of sound. We are told, for instance, that sounds produced by explosives are sometimes heard at very great distances, when none of these sounds are heard at points comparatively close to the origin. Again, although the wind is capable of carrying sounds to a moderate distance, transmission to points remote by 100 miles and more is found to be independent of the weather.

By means of close investigation with microphones it has been proved that when sounds are heard at great distances, the energy has traversed the atmosphere at levels which reach a maximum height of 25 miles. And there the air is warmer than on the ground.

In this connection, it was found during the world war that the drum on the western front could be heard in Great Britain only in summer and that at similar distances in Germany it was heard only in winter. This consistent alternative proved to be due to the change of the prevailing wind in the upper atmosphere, which at a height of 15 miles was generally from the east in summer and from the west in winter.

Meteorologists claim that the reversal is connected with a great range of temperature in the upper atmosphere over Arctic circles during the course of the year. But they have yet found no satisfactory explanation of the high temperature which prevails in the upper atmosphere at all seasons. It is said, from pole to pole.

Head Of Soviet Government

World War Gave Stalin Prominent Place In History

A thorough job of cleaning out the war profiteers would land us in the most surprising company. For instance there can be little question that by far the biggest war profiteer in the world to-day is the Soviet government in general and Joseph Stalin in particular. If there had been no World War there would have been no Russian revolution. The bloody Japanese war of 1904-5 shook the Romanoff throne. The catastrophe of 1914-17 sent the Czarist system into the dust.

Communism to-day offers itself to the world as the only hope of peace among the nations. The horrors of war are a favorite subject of discourse at Moscow. But it would be interesting to have Stalin lay his hand on heart and say that he wishes the World War had not happened. Absolute power over 170,000,000 people and a prominent place in history are the profits which the World War brought to Stalin.—New York Times.

A Super-Gear Shift

Has Over 11,000 Speeds And Four Shift Levels

What would be a nightmare to a four-legged motorist, a super gear shift with 11,011 distinct speeds, was in operation at California Institute of Technology at Pasadena, California.

The gear shift, probably the most complicated ever assembled, governs the speed on electric motors driving apparatus used to test pumps for the Colorado river aqueduct. It consists of a wheel with a score of toothed gears, with four shift levels each of which may be set in 10 different positions.

Possible pump speeds start at half a revolution a minute and jump by half-revolution steps to 5,000 revolutions a minute.

A new atmosphere balloon is being built in Soviet Russia.

London Woman Was Charitable

Payments Have Been Made From Fund For 134 Years

Annual gifts were made over a century and a quarter ago by a London woman, Mrs. Elizabeth Heather. Nobody knows who she was or anything about her except that she was a charitable inclined, but her name is still kept green by her gifts of £10 to six widows of decayed house-holders, which have now been made regular for 134 years. When Mrs. Heather perished she left the fund from which these gifts are made there were then, as now, respectable people who, through no fault of their own, had fallen upon hard times, and it was these women Mrs. Heather particularly desired to help. She therefore laid down that recipients of her gifts should be widows of persons who have been in a respectable position in the world, and paid house rent and taxes, and who from circumstances beyond their control have become poor and needy. She also stipulated that applicants should be women of good moral character. The receipt of poor law relief is also an absolute disqualification.

New Telephone Record

Victor Girling The World In A Quarter Of A Second

Two telephone wires 50 feet of each other were linked experimentally by a circuit of 23,000 miles of air and wire. The loop set new time and distance records.

Walter R. Gilford, president of the American Telephone and Telegraph Company, called T. G. Miller, vice-president, his voice ringing the world in a quarter of a second. His call went from New York to San Francisco, Java, Amsterdam, London and back again.

He was relayed over wires to the Pacific coast, broadcast to Java across 9,000 miles of ocean and retransmitted in Amsterdam, spanning 7,000 miles. From Holland the voice went to London by submarine cable under the North Sea.

Summer Range For Growing Chickens

Control Of Parasites

Control of disease and parasites is of the utmost importance in the successful rearing of poultry and one of the simplest and least expensive ways of achieving it is the use of clean summer range for the growing stock. In order to be effective in the control of diseases and parasites, summer range must be clean ground, and by clean ground is meant ground on which poultry has not been kept for at least two years. In fact, it is becoming evident that a longer period may be necessary between the times of using land for chickens as some of the soil-borne disorders will apparently survive for a longer period than two years.

At the Dominion Experimental Station at Lethbridge, Alberta, three ranges have been used for young stock, each range being used only once every third year. Through the use of this range, in addition to control measures, the incidence of the among the growing stock has been satisfactorily kept in check. Parasites have been controlled to the extent that they are practically unknown on the station.

The ranges at this station are in the dry belt area and are seeded down with alfalfa and broom grass. While more green feed could be obtained on range, the improved range, the greater amount of moisture would be conducive to the development of bacteria and parasites. A dry location is more desirable than one where moisture may accumulate during wet weather. Where a perennial pasture has not been established as a source of green feed, annual crops such as wheat or oats will supply satisfactory green feed for a considerable part of the summer.

To Control Grasshoppers

Scientists Discover Parasite Which May Help To End Plague

Discovery of a parasite which may be a scourge to grasshoppers even as a community health supporter. In a public well-informed on the menace of the house fly to health and the value of the mosquito in the control of malarial diseases, a grasshopper plague which has been a scourge to man since time immemorial. Dr. R. H. Miller, staff zoologist, first studied the parasite in the malpighian tubules—those corresponding to human kidneys—"nephros" since he was studying in 1925. Since Dr. King and Dr. A. B. Taylor have continued research learning much of its capabilities.

Most important of all, the experiments finally proved the parasite was fatal to the insects. The experiments showed that they multiply at the rate of 2,000,000 every two weeks, weakening reproductive organs of the grasshoppers and eventually killing them.

In many instances death resulted within two weeks. Thus far the only method found for controlling grasshoppers contract the parasite is by eating food contaminated by it. The parasite does not affect other insects or humans, the zoologists reported.

Easy Experiments

Electricity Can Be Generated In Very Simple Way

Here is a simple experiment by which electricity can be generated. Take an ordinary tumbler or glass and rub it with a piece of dry silk. If the silk is warmed the result will be better. The friction generates electricity on the surface of the glass and if a feather is brought toward it it will be found that the feather is attracted to the glass. If no feather is handy a piece of dry tissue paper may be used. That also will be attracted to the glass.

Another way of generating electricity is to take a piece of brown paper, place it on the table, and rub it briskly in one direction with a warm piece of flannel or the sleeve of a coat. If we lift the paper up and hold it near our nose we shall have a feeling like cobwebs on the nose. If we bring the paper almost to touch our nose in a dark room we shall see a spark and hear a slight crack, as the electricity passes from the paper to our body.

FANCFUL FABLES

Menace Of The House Fly

Is A Prolific Carrier Of Many Dangerous Diseases

Different times, different manners. In medieval days when the black death, typhus, smallpox, and other virulent plagues were rampant, it was a matter of course, the phrase "he would not kill a fly" was invented as a very high compliment to personal goodness. To-day, the person who would not kill a fly is looked upon merely as ignorant. The house fly is a menace to health, in distribution and is notorious for the part it plays in the dissemination of such dangerous diseases as typhoid, infantile diarrhoea, tuberculosis, the number varying with the season. It breeds in filth of the most objectionable kind, and yet it is tolerated in many homes, and public eating places. The fly is a menace to public health owing to its habit of passing directly from putrid filth to human food, carrying with it bacteria and other organisms and particles of decomposing organic matter on its very body, legs, sticky feet, and mouth-parts. Under no circumstances can it be so easily converted to food in its excreta and regurgitated saliva (fly vomit) as in distribution and is notorious for the part it plays in the dissemination of such dangerous diseases as typhoid, infantile diarrhoea, tuberculosis, the number varying with the season. It breeds in filth of the most objectionable kind, and yet it is tolerated in many homes, and public eating places. The fly is a menace to public health owing to its habit of passing directly from putrid filth to human food, carrying with it bacteria and other organisms and particles of decomposing organic matter on its very body, legs, sticky feet, and mouth-parts. Under no circumstances can it be so easily converted to food in its excreta and regurgitated saliva (fly vomit) as in distribution and is notorious for the part it plays in the dissemination of such dangerous diseases as typhoid, infantile diarrhoea, tuberculosis, the number varying with the season. It breeds in filth of the most objectionable kind, and yet it is tolerated in many homes, and public eating places. The fly is a menace to public health owing to its habit of passing directly from putrid filth to human food, carrying with it bacteria and other organisms and particles of decomposing organic matter on its very body, legs, sticky feet, and mouth-parts. Her many friends in town were glad to see Mrs. H. Johnson around again after her recent illness.

Mrs. C. T. Hall left Monday evening for her old home in Hamilton, Ont., where she will spend a month visiting friends.

Mr. Van Johnson, who has been confined to his home for the past week, suffering from a severe cold, is able to get around again.

It has been drawn to our attention that in the list of merchants who contributed to the Diamond Jubilee fund published in our issue of two weeks ago, the name of Mr. J. Maskell was inadvertently omitted.

The weather appears to have settled down to the usual sunny southern Alberta spring kind. The warmer weather of the past few days has brought forth the plants and garden stuffs along wonderfully.

Knaul and Sued Andrieu, who have been attending the School of Agriculture, were successful in passing their first year's Examinations. Knaul has secured a position at the school for the holiday season and is employed on a farm near Oids.

Jim Podesta is now able to be around again after being confined to his bed for several weeks.

Mr. and Mrs. J. Hope McVaters and J. Davies motored to Calgary yesterday to see the local football team play.

As a result of this absence, to assure this spring the practice now looking its prettiest and is furnished with abundant pictures on graining, lands.

The regular meeting of the A. A. to the Legion will be held on Tuesday June 4th at 2:30 in the L. O. O. F. Hall. The provincial president and members of Medicine Hat Aux. will be present.

CARD OF THANKS

I wish to thank the employees of the Dominion Glass Co. also friends in Redcliff for a medicine hat for their many kindnesses shown me during my present illness.

M. Gillies

The depressed price of farm products is a problem with which everyone is familiar, but on the 1913 basis farm product prices have never been so low as gasoline. However 1913 and 1929 gasoline did not rise in price to nearly the same extent as farm products, yet since 1929 its price has almost continuously declined. The data for the above graph are based on figures published by the Dominion Bureau of Statistics.

A FAIR DEAL POLICY

In the fifty-four years of its existence, Imperial Oil Limited has always welcomed legislation in the interests of labor and the basic industries. It has never had a labor dispute. It has always paid fair wages. To the greatest extent possible it has provided continuous employment and it has given its workers increasing leisure so as to expand employment. It has sickness and death benefits and old age pensions because it believes that the worker and his dependents are entitled to such protection.

Imperial Oil has always tried to deal fairly with collateral industry and with its competitors. Its success in this connection is indicated by the fact that it has never had a major lawsuit. It has always recognized the principle that the only satisfactory business transaction is the one which affords a fair profit to all parties concerned. It has fulfilled all its undertakings. It has enforced no onerous claims on others.

Imperial Oil has always tried to deal fairly with the consumer. It has continuously improved the quality and steadily reduced the prices of its products. It has invested millions to make those products always available wherever they may be needed.

In 1934 Imperial Oil earned \$2,023,400.12 from its Canadian manufacturing and marketing operations. This, you may say, is a lot of money, but to each that without Imperial Oil had to make and market goods to a value of \$2,023,400.12. The workman who in the course of a year sold \$2,200 worth of goods and made a profit of \$100 would not be regarded as enjoying an undue measure of prosperity. But his ratio of profit to the total volume of his business would be the same as Imperial Oil's.

It has been Imperial Oil's practice to "make wisely, measure truly, trade justly" for this it believes to be the secret of success.
